

# Haq Agent

*An AI agent that finds the government schemes people already qualify for  
— and helps them actually get the benefit.*

Participant: Individual (Round 2)

## PROBLEM STATEMENT

**It's not that schemes don't exist. It's that they never reach the people who need them most.**

### **Awareness stops at exams, not opportunities**

NITI Aayog opens fresh internship applications in the first ten days of every single month — a real, recurring opportunity. In rural classrooms, almost no one has heard of it. Awareness stops at board exams and entrance tests; everything in between stays invisible.

### **The benefit often reaches the wrong address**

Many quotas and subsidies meant for low-income, rural households get claimed by educated, urban-based families who simply hold a rural address on paper — while the family that genuinely needs it next door never even hears the scheme exists.

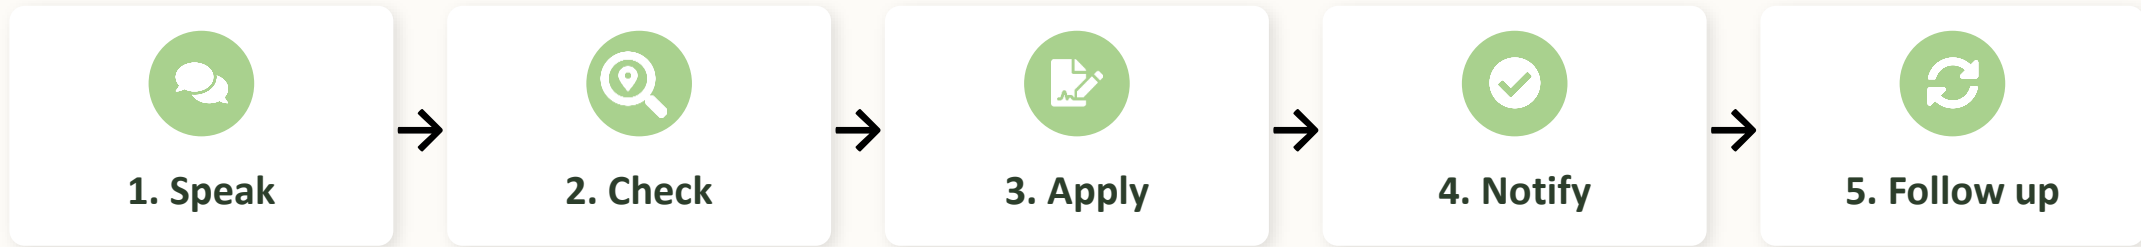

### **Discovery is scattered and disconnected**

Schemes for farmers, students, patients and workers sit across many different portals, with no single place that tells a person clearly what they actually qualify for.

## PROPOSED SOLUTION

### Haq Agent — one AI agent that watches for every scheme on your behalf

You describe your situation once. The agent keeps checking, keeps you informed, and keeps acting — even when you're not asking.

#### Core idea: it doesn't wait to be asked

The agent checks eligibility, tells the person what documents they need, helps them register, and sends an SMS and email automatically the moment a scheme opens, launches, or gets approved.

#### Works across every field — not just education

Education

Agriculture

Health

Pension & Welfare

Complaint redressal

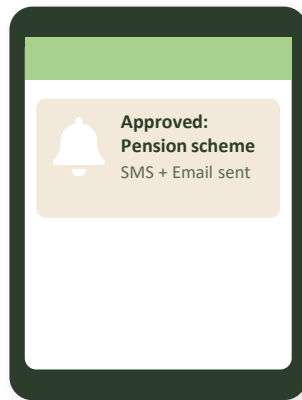

## KEY FEATURES

### Four things the agent does for you

#### One agent, every scheme

Pick a category — education, farming, health, pension, or complaints — and start from your problem, not a department name.

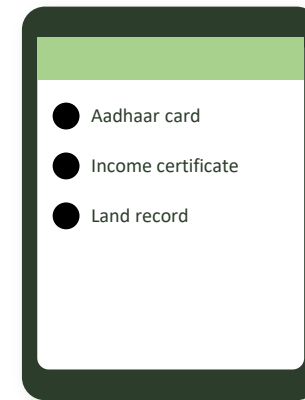

#### Automatic notifications

The moment you're eligible, approved, or a new scheme opens — an SMS and email go out on their own.

#### Hindi + English, voice or text

Speaks the user's language — literally — so literacy or smartphone comfort is never a barrier.

#### checklist & guidance

Tells you exactly which documents you still need — before you waste a trip to the office.

TECH STACK

Built with free, student-friendly tools

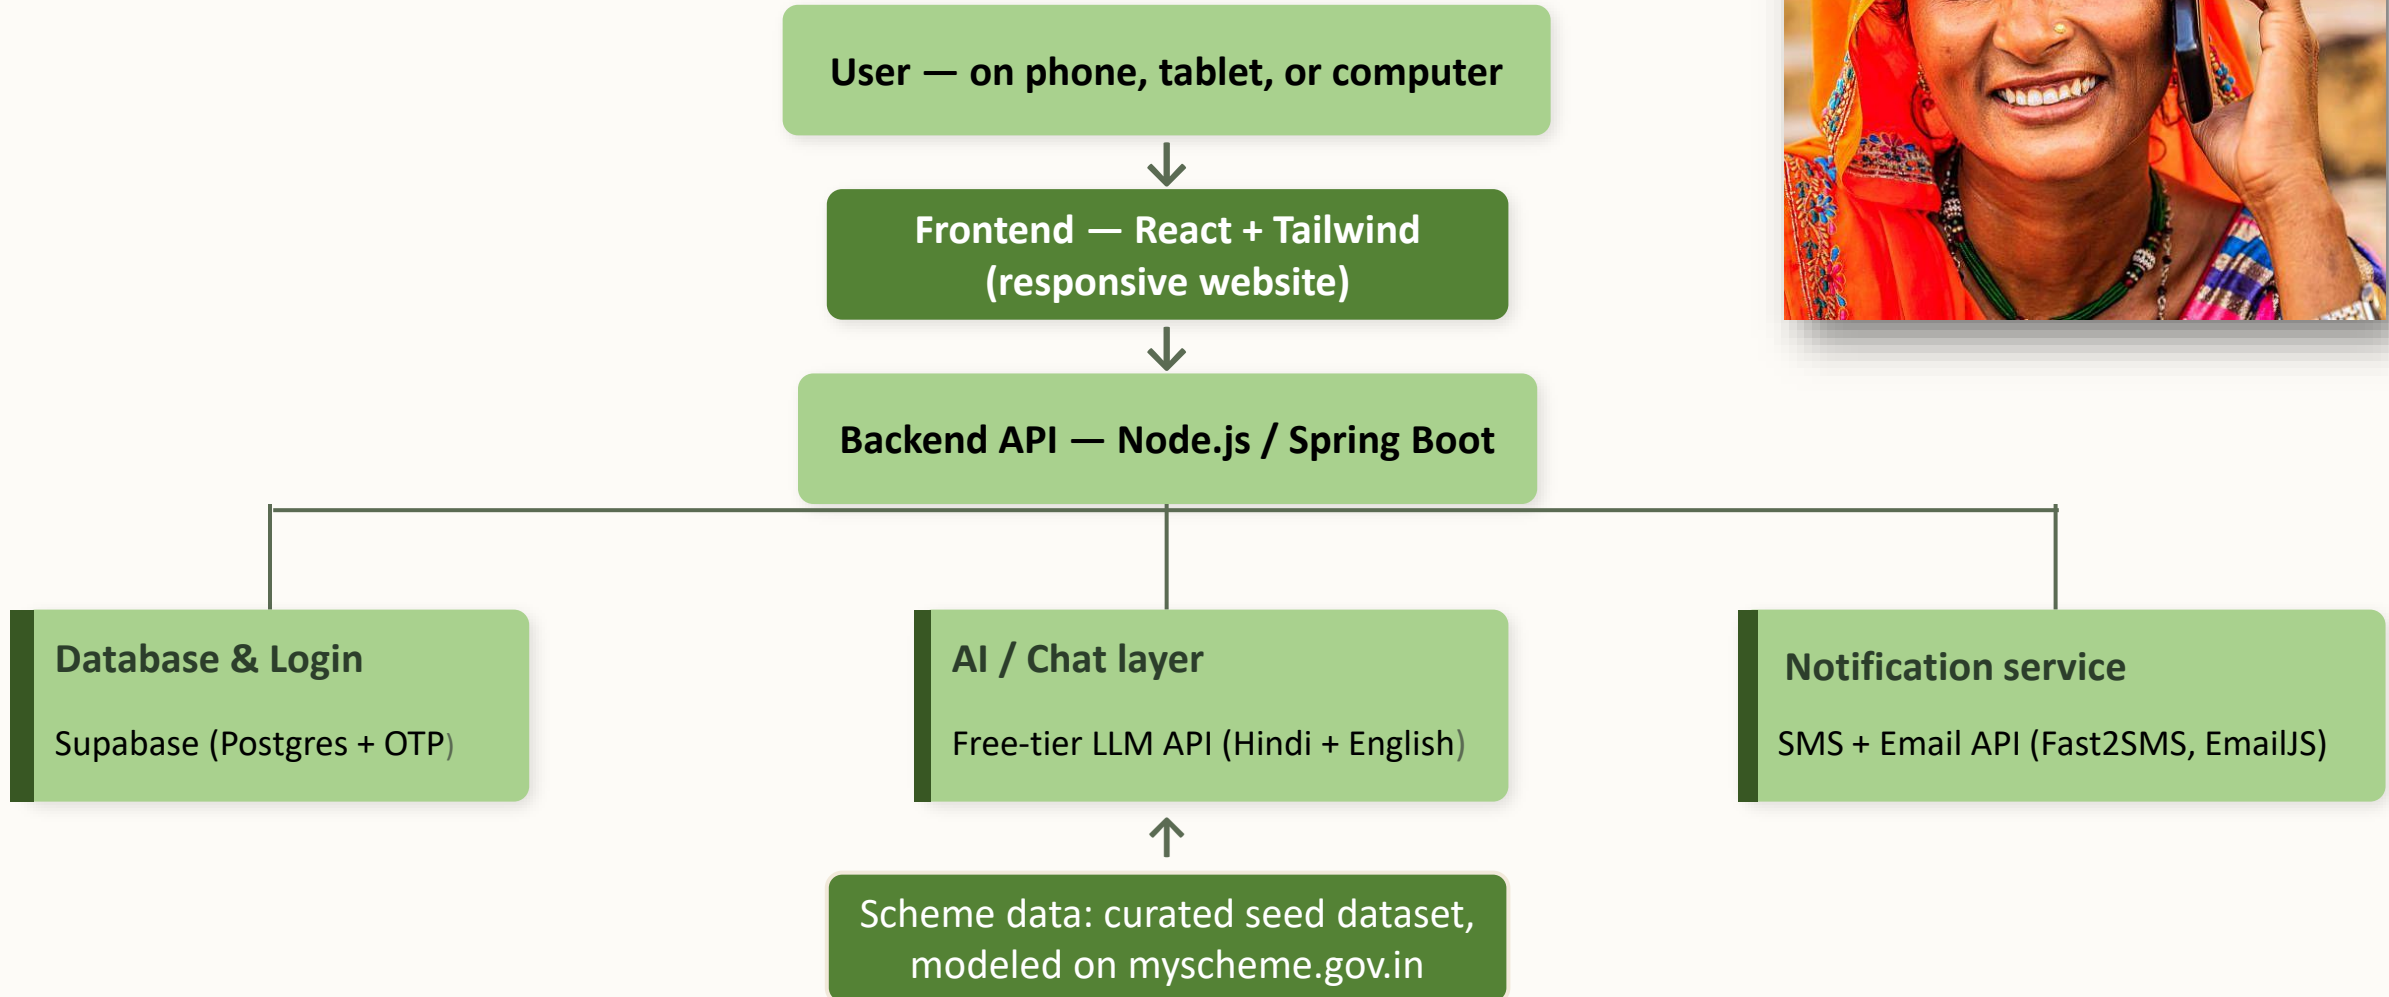

*This is our proposed framework for the prototype phase — a starting plan, not a fixed commitment. Exact tools may be refined as development needs require.*

|                  |                        |                                                                                    |
|------------------|------------------------|------------------------------------------------------------------------------------|
| Frontend         | React + Tailwind CSS   | Fully responsive on mobile, tablet, and desktop by default; hosted free on Vercel. |
| Backend          | Node.js or Spring Boot | Handles eligibility logic and scheme matching; hosted free on Render.              |
| Database & Login | Supabase               | Free Postgres database with built-in mobile OTP login — saves setup time.          |
| AI / Chat layer  | Free-tier LLM API      | Powers the bilingual Hindi-English conversation with the user.                     |
| Notifications    | SMS & Email API        | Free-tier services like Fast2SMS or EmailJS to alert users automatically.          |

## ARCHITECTURE

### How the pieces connect

*A simple, proposed architecture for the prototype — details may evolve as we build.*

# REAL STORIES

## Why this isn't a hypothetical problem

### STUDENT — SCHOLARSHIP

*Sakshi Singh Patel, from Maihar, MP scored 95% in her MP Board exams — enough to qualify for the Pragati Scholarship. She didn't know it existed. It was only after she moved to college in an urban area, and a city-raised friend happened to mention it, that she found out and finally claimed what she had already earned.*

#### HOW HAQ AGENT HELPS

Haq Agent would have told Sakshi she was eligible the moment her result came in — no urban friend required.

### GRADUATE — INTERNSHIP

*A well-educated graduate from a rural-area college stayed unemployed for months, simply because he never knew that NITI Aayog opens fresh internship applications in the first ten days of every single month. The opportunity was real and recurring — the awareness around it never reached him.*

#### HOW HAQ AGENT HELPS

Haq Agent would notify him automatically at the start of every cycle, every month, without him having to go looking for it.

### FARMER — SUBSIDY

*Many farmers who actually work the land don't know which scheme they qualify for, or that one exists at all. Meanwhile, people who have long since moved to the city — but still hold a rural address on paper — quietly claim the same benefit, simply because they knew where to look.*

#### HOW HAQ AGENT HELPS

Haq Agent checks eligibility directly against the person's situation, so the benefit follows genuine need — not just who knew the system.

## IMPACT

# Designed to reach people, not just devices

**1000+**

schemes scattered across  
government portals today

**Voice first**

works for low-literacy  
and feature-phone users

**SMS + Email**

automatic alerts the  
moment you're eligible

Reaching the last mile — not through app stores, but through people already trusted

**ASHA & Anganwadi workers**

Introduce the agent during routine household visits — no cold app discovery needed.

**Panchayat secretaries & Lok Seva Kendras**

Act as a familiar, trusted bridge for first-time users.

**Word of mouth**

Once one family benefits, that becomes the strongest distribution channel in the village.

## FUTURE SCOPE

### Roadmap beyond the prototype

#### Phase 1 — Prototype (now)

- categories: Education, Agriculture, Pension
- Hindi + English, voice and text
- SMS & email alerts on a seed dataset of schemes

#### Phase 2 — Next

- Expand to Health and Complaint redressal
- Wider scheme coverage across more states
- Explore tie-ups with official scheme APIs (e.g. [myscheme.gov.in](https://myscheme.gov.in))

#### Phase 3 — Vision

- Partner with Panchayats & Lok Seva Kendras for offline support
- Add regional languages beyond Hindi and English
- Build a transparency view: which schemes reach whom, and where gaps remain

## Government schemes shouldn't stay hidden.

*Haq Agent makes sure the right scheme finds the right person, on time — regardless of who already knows the system.*

### Conclusion

A simple idea, built on a real and recurring problem: awareness, not eligibility, is what's broken. Haq Agent closes that gap with one agent that watches, checks, and notifies — so opportunity stops depending on who already knows where to look.
